Template Manual

Suppablog HTML

Thank You :)

Thanks for purchasing template and for supporting our work. Suppablog is our new fancy template. Responsive, clean and professional look with sleek design will satisfy all your needs.

You will need basic HTML, CSS, jQuery skills to edit Suppablog HTML. We will try to help you out with this documentation.

HTML Structure

Suppablog consist several HTML files:

- index.html - Front Page
- about.html - About Page
- scroll.html - Scroll Page
- contact.html - Contact Page
- single.html - Single Page/Post

index.html - Front Page

Each page (.html file) has specific class in body tag. For index.html is:

```
<body class="home blog">
```

Also, on front page, first post is featured and code for it looks like this:

```
<article id="post-1" class="blog-item-holder featured-post">
  <div class="entry-content relative">
    <div class="content-1170 center-relative">
      <div class="cat-links">
        <ul>
          <li>
            <a href="#">Crafting</a>
          </li>
        </ul>
      </div>
      <div class="entry-date published">February 12, 2016</div>
      <h2 class="entry-title">
        <a href="single.html">Whatever is begun in anger ends in shame</a>
      </h2>
      <div class="excerpt">
```

```
        Now when I had mastered the language of this water and had come to
know every trifling feature that bordered the great river as familiarly as I knew the letters of the
alphabet, I had made a valuable acquisition. I still keep in mind a certain wonderful sunset which I
witnessed when and steamboating<a class="read-more" href="single.html"></a>
```

```
    </div>
    <div class="clear"></div>
</div>
</div>
</article>
```

All others posts are also placed inside `<article>` tag, but html code is a little bit different, like this:

```
<article id="post-2" class="blog-item-holder">
    <div class="entry-content relative">
        <div class="content-1170 center-relative">
            <h2 class="entry-title">
                <a href="single.html">I like to reinvent myself</a>
            </h2>
            <div class="cat-links">
                <ul>
                    <li>
                        <a href="#">Science</a>
                    </li>
                </ul>
            </div>
            <div class="entry-date published">February 12, 2016</div>
            <div class="clear"></div>
        </div>
    </div>
</article>
```

about.html - About Page

For about page is also important to include this classes in **body** tag

```
<body class="about page page-template-default">
```

scroll.html - Scroll Page

This page must start with this body code:

```
<body class="page-scroll">
```

Also, each scrolling item (post) is placed in code like this:

```
<li style="background-image: url('demo-images/featured-image.jpg');">
    <article class="entry-holder">
        <h2 class="entry-title">
            <a href="single.html">Whatever is begun in anger ends in shame</a>
        </h2>
        <div class="info-holder">
            <div class="cat-links">
                <ul>
                    <li>
                        <a href="#">Crafting</a>
                    </li>
                </ul>
            </div>
            <div class="entry-date published">February 12, 2016</div>
        </div>
        <div class="excerpt">Now when I had mastered the language of this water and
had come to know every trifling feature that bordered the great river as familiarly as I knew the letters
of the alphabet, I had made a valuable acquisition. &nbsp; I still keep in mind a certain wonderful sunset
which I witnessed when and steamboating<a class="read-more" href="single.html"></a></div>
        <div class="clear"></div>
    </article>
```

```
</li>
```

single.html - Single Page/Post

This page must start with this code:

```
<body class="single-post">
```

Also, on this page you will find a slider. Code for slider looks like this:

```
<script>
    var slider1_speed = "500";
    var slider1_auto = "true";
    var slider1_pagination = "true";
    var slider1_hover = "true";
</script>
<div class="image-slider-wrapper">
    <div class="caroufredsel_wrapper">
        <ul id="slider1" class="image-slider slides center-text">
            <li></li>
            <li></li>
            <li></li>
        </ul>
    </div>
    <div class="slider1_pagination carousel_pagination left"></div>
    <div class="clear"></div>
</div>
<div class="clear"></div>
```

If you need one more slider, duplicate that code and change “**slider1**” string on several places with new string, for example “**slider2**”. So you will have “**slider2_speed**”, “**slider2_auto**”, id=“**slider2**”,

class="slider2_pagination"

contact.html - Contact Page

This page must start with this code:

```
<body class="contact page page-template-default">
```

Also, on this page is displayed Google Map. Code for map is this:

```
<script>
    var lat = "48.87209";
    var lng = "2.34791";
    var marker_lat = "48.87209";
    var marker_lng = "2.34791";
    var zoom = 16;
</script>
<div class="map" id="map"></div>
```

Map will be displayed inside the div with **id="map"**. To include your own map, you need to set your own latitude & longitude number and also to set it for the marker.

Mail Configuration

Note: Do not remove any quote or double quote signs while doing this.

One notice: this will be functional only on your server, php file can not be executed on your local computer.

Just add your own email address here in your config.php file.

```
//SITE GLOBAL CONFIGURATION
```

```
$email = "your@email.here"; //<-- Your email
```
